HANDLE BRUSH

GLITZ HANDLE BRUSH

FEATURES

Wire hand-brushes are popular with both industrial and DIY users. They are used for removing rust, corrosion, paint and primer and for generally producing clean surfaces. These brushes have unique curved profiles with a narrow face to make them perfect for accessing those hard-to-reach places. The high density wire fill and the contoured plastic handle allow users to apply a higher pressure than that used with conventional wire brushes. These brushes are fitted with colour coded handles featuring hanging slots, and they are available in three different wire types to suit most applications.
